Rally Health Check

An expert evaluation of how your organization configures and uses Rally, with clear, practical recommendations to get more value from it.

Rally is only as effective as the way it is set up and used. A Virelli Rally Health Check benchmarks your current subscription against a consistent set of proven dimensions, recognizing what is already working and pinpointing where targeted changes will have the biggest impact across your Agile teams, programs, and portfolios.

Are you getting the most from Rally?

- Has your Rally configuration kept up with changes to your teams, programs, or portfolios?
- Is Rally usage inconsistent across teams?
- Are you unsure which improvements would make the biggest difference?

What you gain

- A clear baseline of the current state of Rally and the health of your teams, programs, and portfolios
- Recognition of best practices already in place, so you can reinforce and scale them
- Prioritized recommendations for process and tool improvements

How it works

1. **Perform the Health Check**
   We review your Rally configuration and usage data.
2. **Prepare results**
   Findings are organized into strengths and recommendations.
3. **Present findings**
   We walk your stakeholders through the results together.
4. **Schedule follow-up**
   We agree on next steps and check in on progress.

What you receive

- A results presentation covering strengths, areas for improvement, and supporting data
- A detailed findings document for reference and follow-through

What we need to get started

- A dedicated Rally account for the Health Check
  - If you use single sign-on (SSO), the account must be whitelisted
  - Workspace admin privileges are preferred, but not required
- Access to the project(s) in scope for the Health Check

Our approach: people, process, platform

We use platform data to start conversations, not to grade teams. A Health Check is never a judgment of a team or Agile Release Train. Our observations are a starting point for improvement.
